Jet Manufacturers are Entrepreneurship Leaders of 2013

December 6, 2013

Statuettes were awarded to Entrepreneurship Leaders of the year 2013. The Metal-Master company which produced the FLARIS LAR 1 jet is this year's winner.

At the conference on Friday in the main office of the Warsaw Stock Exchange (GPW) the owners of the wining company, Sylwia and Rafał Ładzińscy received the prestigious award from the hands of Edward Tomasz Polaski – the President of the Foundation of Small and Medium Enterprises (MSP) and chairman of the Contest Jury, and Paweł Graniewski – the Vice President of the Board of the Stock Exchange.

- Our plane is a response to people's need to travel quickly. This is why we constructed a fast, lightweight and inexpensive aircraft. We wanted the plane to take off almost from your front lawn and to land at small airports, as close to the destination as possible. Our technological and engineering background allowed us to design the perfect plane. I am sure that we built the mode of transport for the 21st century – says Sylwia Ładzińska, co-owner of Metal-Master.

This year's contest was held under the honorary patronage of Bronisław Komorowski. The president's message to the participants of the conference and Winners of the Contest was read by Olgierd Dziekoński – the secretary of the State from the Chancellery of the President of the Republic of Poland

The title of „Entrepreneurship Leader of the Year” is awarded to particularly innovative and dynamic companies, as well as to individuals and institutions that support entrepreneurship. This honor is given only to the best of the best – each year only a few companies can boast the title of Entrepreneurship Leaders.

The contest has been organized by the Foundation of Small and Medium Enterprises and the Masovian Chamber of Craft and Entrepreneurship in Warsaw since 1994.

FLARIS LAR 1 is a single-engine business jet with a light-weight composite structure. It belongs to a new category of small, ultralight jets which are ideal for those who need to travel in business or leisure. It combines opposing characteristics: the ease of flying, which is typical for ultralight planes, and performance typical of jets: speed and range. The worldwide innovative solutions implemented in the plane structure are protected by 8 patents obtained by the Metal-Master company, which manufactured this innovative aircraft.
