

Flaris jet exhibited in Warsaw

17 May 2015

The construction of FLARIS LAR 1 was publically shown during the exhibition that closed yesterday entitled "On the wings of time – people and aerostructures of Warsaw University of Technology". The plane that was on display at Warsaw University of Technology is the one that completed strength tests and was dismantled directly from the static load testing facility.

During the exhibition visitors had the opportunity to inspect its airframe design and the most advanced technologies developed by the plane's manufacturer Metal-Master, i.e. preimpregnated carbon structures.

The exhibition was open from May 13 to May 16 at Warsaw University of Technology.

The complete FLARIS LAR 1 jet will be on display already in June (from the 15th to 21st of June) during one of the largest and most important aviation events in the world – the International Paris Air Show at the Le Bourget airport in Paris.

FLARIS LAR 1 is a single-engine jet with a light-weight composite structure. It belongs to a new category of small business jets, which are ideal for those who need to travel quickly for business or leisure. It combines opposing characteristics: the ease of flying, which is typical for ultralight planes, and performance typical of jets: speed and range. The worldwide innovative solutions implemented in the plane structure are protected by 8 patents obtained by the Metal-Master company, which manufactured this innovative aircraft.

The project is co-financed from the funds of the European Union.
